

DECLARATION OF EMERGENCY
Department of Natural Resources
Office of Conservation

AMENDMENT TO STATEWIDE ORDER NO. 29-B (EMERGENCY RULE)

Order requiring continued waste profile analyses of exploration and production (E&P)
waste prior to shipment to a commercial facility, and waste verification testing
upon receipt by a commercial facility
(Effective Date August 29, 1998)

* * * * *

Pursuant to the power delegated under the laws of the State of Louisiana, and particularly Title 30 of the Revised Statutes of 1950, as amended, and in conformity with the provisions of the Louisiana Administrative Procedure Act, Title 49, Sections 953(B)(1) and (2), 954(B)(2), as amended, the following emergency rule and reasons therefor are now adopted and promulgated by the Commissioner of Conservation as being necessary to protect the public health, safety and welfare of the people of the State of Louisiana, as well as the environment generally, by continuing for approximately 30-days a procedure for testing of exploration and production (E&P) waste prior to shipment to and acceptance by a commercial facility in the State of Louisiana and verification testing after receipt of such E&P waste at a commercial facility.

A. NEED AND PURPOSE FOR EMERGENCY RULE

Certain oil and gas exploration and production waste (E&P waste) is exempt from the hazardous waste regulations under the Resource Conservation and Recovery Act (RCRA). This exemption is based on findings from a 1987-1988 Environmental Protection Agency (EPA) study and other studies that determined this type of waste does not pose a significant health or environmental threat when properly managed. The EPA, in its regulatory determination, found that these wastes are adequately regulated under existing federal and state programs.

Existing Louisiana State regulations governing the operations of commercial E&P waste disposal facilities (Statewide Order No. 29-B) require only very limited testing of the waste received for treatment and disposal at each commercial facility. Such limited testing finds its basis in the above-mentioned national exemption for E&P waste recognized by the EPA. However, public concern warranted the Commissioner of Conservation to issue an Emergency Rule effective May 1, 1998 (May 1, 1998 Emergency Rule), the purpose of which was to gather technical data regarding the chemical and physical makeup of E&P waste disposed of at commercial E&P waste disposal facilities within the State of Louisiana. The May 1, 1998 Emergency Rule had an effective term of 120-days.

The May 1, 1998 Emergency Rule required comprehensive analytical testing of E&P waste at the site of generation together with verification testing at the commercial E&P waste disposal facility. During the 120-day term of the May 1, 1998 Emergency Rule, over 1,200 E&P waste testing batches were analyzed, with the analytical results being filed with the Office of Conservation.

However, technical experts under contract with the Office of Conservation have determined, among other reasons, that although most waste types are expected to yield sufficient data within the initial 120-day period to draw inferences as to average concentrations and statistical distribution of concentrations in these wastes, additional data will strengthen the validity of the inferred distributions. Therefore, the general provisions of the May 1, 1998 Emergency Rule will be continued for an additional period of approximately 30-days, as further outlined herein.

Statewide Order No. 29-B Emergency Rule herein enacted will provide requirements for continued E&P waste characterization and verification testing. After implementation of this Emergency Rule, Conservation will initiate rulemaking to promulgate new permanent regulations which will recognize and encourage new and innovative ways to manage E&P waste. Best management practices will be the measure of acceptability for both existing and emerging technologies. Analytical data generated during the effective term of the May 1, 1998 Emergency Rule, and the Emergency Rule enacted herein, along with best management practices, will be used to determine the limits for waste constituents received at commercial E&P waste disposal facilities.

B. SYNOPSIS OF EMERGENCY RULE

1. E&P Waste To Be Tested For Characterization

As a key provision of this Emergency Rule, a waste profile must continue to be developed for each specific testing batch of E&P waste proposed for storage, treatment or disposal at a commercial facility in the State. Based on the results of the 1997 Conservation sampling and testing program, as well as Staff expertise, four (4) different groups of analytical procedures were established and incorporated into the May 1, 1998 Emergency Rule. Depending on the chemical complexity of a specific testing batch, applicable testing procedures will continue to be required by this emergency Rule to establish the waste profile for each testing batch.

In order to not unnecessarily delay drilling operations utilizing closed mud systems with limited on-site storage systems, or in emergency situations, provisions have been made to allow documentation of testing procedures to be submitted to the receiving commercial facility within 30-days after setting of the surface casing. Such provision is reasonable because only native water base drilling muds are commonly used at the startup of drilling operations and prior to setting of surface casing. Additionally, alternate sampling and testing protocols consistent with Emergency Rule standards may be authorized by the Office of Conservation upon written request. For example, the taking of waste characterization samples at a commercial facility may be proposed as an alternative to taking such samples at the site of generation.

Produced water, produced formation fresh water and other E&P waste fluids are exempt from certain provisions of the testing requirements provided they are: 1) transported in enclosed tank trucks, barges, or other enclosed containers, 2) stored in enclosed tanks at a commercial facility, and 3) disposed by deepwell injection. Such provision is reasonable because, provided the above conditions are met, exposure to the public and to the environment would be minimal.

2. E&P Waste Will Be Transported With Identification

This Emergency Rule primarily requires that each E&P waste shipping unit transported from the site of generation to a commercial facility will be accompanied by a copy of the waste profile (Form UIC-35) and an Oilfield Waste Shipping Control Ticket (UIC-28, Manifest) and presented to the facility operator before offloading. Timely filings of required laboratory reports will be made to the Office of Conservation.

3. Each Load of E&P Waste Will Be Tested At a Commercial Facility

Before offloading at a commercial E&P waste disposal facility and in order to verify that the waste qualifies for the E&P category, each E&P waste shipping unit shall be sampled for required parameters. Additionally, the presence and concentration of BTEX (benzene, toluene, ethyl benzene and xylene) compounds and hydrogen sulfide must be determined. Appropriate records of tests shall be kept at each commercial facility for review by the Office of Conservation.

C. REASONS

Recognizing the potential advantages of the ongoing testing program for the characterization of exploration and production (E&P) waste that is fully protective of public health and the environment, and recognizing the potential advantages of continuation of the testing program that adequately characterizes such waste as to its potentially toxic constituents, it has been determined that failure to continue such procedures in the form of an administrative rule may lead to the existence of an imminent peril to the public health, safety and welfare of the people of the State of Louisiana, as well as the environment generally.

Protection of the public and our environment therefore requires the Commissioner of Conservation to take immediate steps to assure that adequate testing continues to be performed before E&P waste is treated or otherwise disposed of in a commercial facility. The Emergency Rule, Amendment to Statewide Order No. 29-B (EMERGENCY RULE) set forth hereinafter is now adopted by the Office of Conservation.

D. EMERGENCY RULE

Title 43

NATURAL RESOURCES

Part XIX. Office of Conservation - General Operations

Subpart 1. Statewide Order No. 29-B

Chapter 1. General Provisions

§129. Pollution Control

§129.B.1 Definitions

Container - A pit, storage tank, process vessel, truck, barge or other receptacle used to store or transport E&P waste.

Drilling Waste - Water base mud, oil base mud or other drilling fluids and cuttings generated during the drilling of wells. These wastes are a subset of E&P waste.

Exploration and Production (E&P) waste - as defined in §129.M.1

NOW - exploration and production (E&P) waste

Testing Batch - an accumulation of an E&P waste type generated in association with exploration and production operations, or a mixture of such waste types, which is initially collected or temporarily retained at the site of generation in a container, quantified as follows:

(a) Except for drilling waste, a testing batch is defined as E&P waste that is ready to be shipped offsite to a commercial facility. After the testing batch has been established and a sample has been taken, no additional waste may be added to the container(s) until all of its contents have been shipped to a commercial facility. If additional waste is added to the container(s) before all of its contents have been shipped, this shall constitute a new testing batch. Multiple containers may be used to store or ship a single testing batch from a single generation source (e.g., pit, tank, etc.) to a commercial facility.

(b) In the case of drilling waste, each type of mud system (water base, oil base or other) together with cuttings and fluids associated with such system, shall constitute a separate testing batch. During drilling operations at a depth below the surface casing, the drilling waste generated for each mud system shall be sampled as a separate testing batch. Shipments of a portion of a drilling waste testing batch will not constitute formation of a separate testing batch.

(c) For production tank sludge and other process vessel waste, the container (tank, vessel, etc.) need not be taken out of service during sampling and analysis of the testing batch.

Shipping unit - an individual shipment of a portion or the entirety of an identified E&P waste testing batch to a commercial facility.

[See Prior Text in B.2.a-m]

§ 129.B.2.n E&P Waste Characterization Procedures

i. All E&P waste generated within or without the State of Louisiana including offshore Louisiana (both state and federal waters) and proposed to be transported to a commercial facility in the State of Louisiana must be sampled and analyzed in accordance with EPA protocols or Office of Conservation's approved procedures. For procedures B, C and D, E&P waste shall be tested by a laboratory not owned or operated by the generator of the waste.

ii. The following procedures are to be utilized as applicable (see table in § 129.B.2.n.iii below) to characterize each E&P testing batch:

| | | | |
|---|---|--|----------|
| Procedure A: | color specific gravity turbidity - clear, cloudy, or muddy viscosity - low, medium or high | Procedure (TCLP) for the following metals: | |
| | | Arsenic | Lead |
| | | Barium | Mercury |
| | | Cadmium | Selenium |
| | | Chromium | Silver |
| Procedure C: | Toxicity Characteristic Leaching | | |
| Procedure (TCLP) for the following volatile organics: | | | |
| | Benzene | Ethyl benzene | |
| | Toluene | Xylene | |
| Procedure B: | oil and grease (% by weight) reactive sulfide (ppm) | | |
| Procedure D: | Toxicity Characteristic Leaching | | |

iii. The following table indicates which testing procedures in §129.B.2.n.ii above are to be utilized to characterize E&P waste:

| Waste Type/Description | Required Testing Procedures* |
|--|------------------------------|
| 01 - Salt Water (produced brine or produced water) | A, B, C, and D |
| 02 - Oil base mud / cuttings | A, B, C and D |
| 03 - Water base mud / cuttings | A, B and C |
| 04 - Workover / completion fluids | A, B and C |
| 05 - Production pit sludge | A, B, C and D |
| 06 - Production tank sludge | A, B, C and D |
| 07 - Produced sand / solids | A, B, C and D |
| 08 - Produced formation fresh water | A, B, C and D |
| 09 - Rainwater - ring levees/pits | A and B |
| 10 - Washout water | A and B |
| 11 - Washout pit water | A, B and C |
| 12 - Gas plant processing waste | A, B, C and D |
| 13 - BS&W waste from approved commercial salvage oil operators | A, B, C and D |
| 14 - Pipeline test water & pipeline pig water | A, B, C and D |
| 15 - E&P waste generated by permitted commercial facilities | A, B, C and D |
| 16 - Crude oil spill clean-up waste | A, B and C |
| 99 - Other approved E&P waste | A, B, C and D |

* See testing exemptions for E&P wastes as provided in § 129.B.2.n.v, vi, vii, viii and ix below.

iv. If a testing batch is composed of more than one type of E&P waste, the testing procedures applicable to all types of waste in the testing batch shall be utilized to characterize the waste.

v. An E&P waste testing batch containing no more than 5 barrels total volume is exempt from the testing requirements of §129.B.2.n.ii, Procedures B, C and D.

vi. Drilling fluids and cuttings generated during the drilling of surface casing hole are exempt from the testing requirements of §129.B.2.n.ii, Procedures A, B, C and D.

vii. Wash water and solids (E&P waste type 10) generated at a commercial facility by the cleaning of a container holding a residual amount (of no more than 1 barrel) of E&P waste is exempt from the testing requirements of §129.B.2.n.ii, Procedures A, B, C and D.

viii E&P waste stored and transported in a barge from a transfer station to a commercial treatment facility is exempt from the testing requirements of §129.B.2.n.ii, Procedures A, B, C and D.

ix. Produced water, produced formation fresh water, and other E&P waste fluids are exempt from the testing requirements of §129.B.2.n.ii, Procedures A, B, C and D under the following conditions:

- (a) if transported by the generator or transporter in enclosed tank trucks, barges, or other enclosed containers; and
- (b) if stored in an enclosed container at a commercial facility; and
- (c) if disposed by deep well injection.

x. Except for the provisions of §129.B.2.n.v, vi, vii, viii and ix above, E&P waste generated out-of-state, except offshore Louisiana (both state and federal waters), and transported to a Louisiana commercial facility for storage, treatment or disposal must be tested for the parameters required in Procedures A, B, C, and D above.

xi. Testing batch samples shall be taken at the site of generation, tested, and the testing results reported in the following manner:

(a) Upon identifying a testing batch, the E&P waste generator shall send a sample to the testing laboratory and initiate an E&P Waste Profile (Form UIC-35). For each new testing batch the generator must complete the top portion of the form (general information), indicate the waste type / description, and sign the form in the appropriate location.

(b) The generator shall perform test Procedure A for each testing batch and the results reported in the appropriate location on Form UIC-35.

(c) Data Submission

(i) Test Procedures B, C, and D shall be performed on each testing batch sample by the testing laboratory and a laboratory report provided to the generator and to the commercial facility operator within thirty (30) days of the date of the first shipment of each testing batch. Upon receipt of the laboratory test data, the commercial facility shall enter such data on Form UIC-35.

(ii) The generator, commercial facility operator, or testing laboratory shall electronically submit the laboratory data for required E&P waste analyses to the Office of Conservation within thirty (30) days of the first shipment of each testing batch. Such

report shall be submitted to the Office of Conservation in ASCII comma delimited format either by electronic mail (E-mail via Internet) or on 3&1/2 inch floppy disk. Generators of E&P waste must contact the Office of Conservation, Injection and Mining Division, if for some reason such electronic reporting cannot be made.

(d) The original completed or partially completed Form UIC-35 must accompany the first E&P waste shipping unit transported to a commercial facility and must be presented to the facility operator with the Exploration and Production (Oilfield) Waste Shipping Control Ticket (Form UIC-28) before off-loading. Form UIC-35 does not need to accompany subsequent waste shipping units for the same testing batch.

xii. The generator or commercial facility operator shall identify each E&P waste

testing batch and each E&P waste shipping unit as follows:

(a) Each testing batch shall be separately identified by using the manifest number (Manifest No.) of the first shipping unit transported to a commercial facility. This testing batch number shall be placed on the E&P Waste Profile in the appropriate location.

(b) The testing batch number shall also be placed on the Exploration and Production (Oilfield) Waste Shipping Control Ticket (Form UIC-28) in the top left corner (under the form number) on the manifest for each shipping unit.

(c) Each E&P waste shipping unit (of each testing batch) shall be identified on the Exploration and Production (Oilfield) Waste Shipping Control Ticket (Form UIC-28) in the top left corner under the testing batch number by a sequential numbering system (e.g., 1, 2, 3, etc.). When the last E&P waste shipping unit of a specific testing batch is sent to the commercial facility, the word END shall be placed next to the load number (e.g., 5 END).

xiii. Alternate sampling and testing protocols consistent with the above standards may be authorized by the Office of Conservation upon written request by an operator or commercial facility. Written authorization must be received prior to initiating alternate sampling and testing protocols.

[See Prior Text in B.3 - B.6.d.iii]

§129.B.6.d Laboratory Procedures for E&P Waste

iv. For reactive sulfides, samples shall be analyzed according to SW 846, Chapter 7, Section 7.3.4 or latest revision by EPA.;

v. TCLP samples shall be analyzed according to EPA document “Test Methods for Evaluating Solid Waste, S. W. 846”, Third Edition, Revised 12/96 or latest revision by EPA.

(a) For TCLP metals, samples are to be extracted according to SW 846 Method 1311, then digested according to SW 846 series 3000 or latest revision by EPA.

(b) Upon completion of the extraction and digestion phases, metals are to be analyzed according to SW 846 methodology series 6000 and/or 7000 or latest revision by EPA.

(c) TCLP organics identified in Procedure C are to be extracted according to SW 846 Method 1311 or latest revision by EPA. Analytes are to be analyzed according to SW 846 Method 8260 or latest revision by EPA.

vi. Except as herein provided otherwise, sampling and testing procedures should comply with Office of Conservation manual “Laboratory Procedures for Analysis of Nonhazardous Oilfield Waste” (latest revision).

[See Prior Text in B.6.e - L]

M. Off-site Storage, Treatment and/or Disposal of E & P Waste Generated From Drilling and Production of Oil and Gas Wells

1. Definitions

[See Prior Text in Definitions]

Commercial Facility - a legally permitted waste storage, treatment and/or disposal facility which receives, treats, reclaims, stores, or disposes of exploration and production waste for a fee or other consideration, and shall include the term “transfer station”.

Exploration and Production (E&P) Waste - drilling fluids, produced water, and other waste associated with the exploration, development, or production of crude oil or natural gas and which is not regulated by the provisions of the Louisiana Hazardous Waste Regulations and the Louisiana Solid Waste Regulations. Such wastes include, but are not limited to, the following:

- a. salt water (produced brine or produced water), except for salt water whose intended and actual use is in drilling, workover or completion fluids or in enhanced mineral recovery operations;
- b. oil-base drilling mud and cuttings;
- c. water-base drilling mud and cuttings;
- d. drilling, workover and completion fluids;
- v. production pit sludges;
- f. production storage tank sludges;
- g. produced oily sands and solids;
- h. produced formation fresh water;
- i. rainwater from ring levees and pits at production and drilling facilities;
- j. washout water generated from the cleaning of containers that transport E&P waste and are not contaminated by hazardous waste or material;
- k. washout pit water and solids from oilfield related carriers that are not permitted to haul hazardous waste or material;
- l. natural gas plant processing (E&P) waste which is or may be commingled with produced formation water;
- m. waste from approved salvage oil operators who only receive oil (BS&W) from oil and gas leases;
- n. pipeline test water which does not meet discharge limitations established by the appropriate state agency, or pipeline pig water, i.e., waste fluids generated from the cleaning of a pipeline;
- o. wastes from permitted commercial facilities;
- p. crude oil spill clean-up waste;
- q. salvageable crude oil;
- r. other approved E&P waste.

Testing Batch - as defined in §129.B.1

Shipping unit - as defined in §129.B.1

§129.M.5. Criteria for the Operation of Commercial Facilities and Transfer Stations

i. Receipt, Sampling and Testing of E&P Waste

[See Prior Text in 129.M.2 - 5.i.i]

ii. Verification Testing Requirements

(a) Before offloading E&P waste at a commercial facility, each E&P waste shipping unit shall be sampled and analyzed by commercial facility personnel for the following:

- (i) Procedure A in § 129.B.2.n.ii above; and
- (ii) pH, electrical conductivity (EC - mmhos/cm) and chloride (Cl) content; and
- (iii) The presence and concentration of BTEX (benzene, toluene, ethyl benzene, and xylene) compounds using an organic vapor monitor or other procedures sufficient to identify and quantify BTEX; and
- (iv) The presence and concentration of hydrogen sulfide (H₂S) using a portable gas monitor.

(b) The commercial facility operator shall enter the pH, electrical conductivity, chloride (Cl) content, BTEX and hydrogen sulfide measurements on the manifest (Form UIC-28) which accompanies each waste shipping unit.

(c) When the commercial facility operator receives an E&P Waste Profile (Form UIC- 35) from the generator, he shall enter the results of test Procedure A (first shipping unit values for each testing batch) in the appropriate location.

(d) When the last shipping unit for an E&P waste testing batch has been received, the commercial facility operator shall enter the maximum BTEX and hydrogen sulfide measurements (for all shipping units in the testing batch) on the E&P Waste Profile (Form UIC-35).

(e) The commercial facility operator shall submit each completed Form UIC-35 to the Office of Conservation within seven (7) days of receipt of the last waste shipping unit of each testing batch. The Conservation Copy of the manifest for each shipping unit that compose a complete testing batch must be attached to the Form UIC-35.

(f) Produced water, produced formation fresh water, and other E&P waste fluids are exempt from verification testing Procedure A, the organic vapor monitor measurement, and the H₂S measurement in (a) above if the conditions of § 129.B.2.n.ix are met.

(g) Records of these tests shall be kept on file at each commercial facility for a period of three years and be available for review by the Commissioner or his designated representative.

E. SUMMARY

The Emergency Rule herein above adopted evidences the finding of the Commissioner of Conservation that failure to adopt the above rules may lead to an imminent risk to public health, safety and welfare, and that there is not time to provide adequate notice to interested parties. However, the Commissioner of Conservation notes again that a copy of the permanent Amendment to Statewide Order No. 29-B will be developed in the near future, with a public hearing to be held as per the requirements of the Administrative Procedure Act.

The Commissioner of Conservation concludes that the above Emergency Rule will better serve the purposes of the Office of Conservation as set forth in Title 30 of the Revised Statutes, and is consistent with legislative intent. The adoption of the above Emergency Rule meets all the requirements provided by Title 49 of the Louisiana Revised Statutes. The adoption of the above Emergency Rule is not intended to affect any other provisions, rules, orders, or regulations of the Office of Conservation, except to the extent specifically provided for in this Emergency Rule.

Within five days from date hereof, notice of the adoption of this Emergency Rule shall be given to all parties on the mailing list of the Office of Conservation by posting a copy of this Emergency Rule with reasons therefor to all such parties. This Emergency Rule with reasons therefor shall be published in full in the *Louisiana Register* as prescribed by law. Written notice has been given contemporaneously herewith notifying the Governor of the State of Louisiana, the attorney general of the State of Louisiana, the Speaker of the House of Representatives, the President of the Senate and the State Register of the adoption of this Emergency Rule and reasons for adoption.

F. EFFECTIVE DATE AND DURATION

1. The effective date for this Emergency Rule shall be August 29, 1998.

2. The Emergency Rule herein adopted as a part thereof, shall remain effective through September 30, 1998.

Signed at Baton Rouge, Louisiana, this _____ day of _____, 1998.

Philip N. Asprodites
Commissioner of Conservation

8/24/98
